

Staff Report:

This report outlines the necessity of a Bi-Directional Amplifier (BDA) system at the Public Works building. Current site surveys and tests conclude that we have critical ARMER radio and AT&T FirstNet "dead zones" in areas that Police and Public Works staff work and occupy. This poses a significant risk to first responder responses during an emergency.

Staff recommends that the Council approve the purchase and installation of a BDA system in the amount of \$5,541.71
